

Building & Budgeting, Search & Display Campaigns, Remarketing Concepts

Tasks

1.

Create a mock Google Search campaign for a new food delivery app, setting a daily budget of ₹500 and choosing the 'Maximize Clicks' bidding strategy. List which keywords you would target and explain why.

2.

Design a Display campaign banner for a new headphones launch on an e-commerce site like Flipkart. Specify the target audience, placements, and write the main headline and description you would use.

3.

Given a scenario where your Zomato-style app is getting lots of clicks but few conversions, adjust your campaign's bidding strategy and budget allocation to improve performance. Write out the steps you would take and justify each change.

Hint: Consider switching to a 'Target CPA' or 'Maximize Conversions' bid strategy and reallocating budget to better-performing ad groups.

4.

Explain how you would set up a remarketing campaign to target users who visited your IPL ticket booking page but did not complete the purchase. Include which audience you would create and what ad message you would show.

Task 1: Mock Google Search Campaign – Food Delivery App

Campaign Name: Food Delivery – Search Campaign

Daily Budget: ₹500/day

Bidding Strategy: Maximize Clicks

Goal: Get maximum relevant website/app visits and increase food-order traffic.

Target Keywords

Keyword	Match Type	Why Target It?
food delivery near me	Phrase	Targets users actively looking for delivery
online food delivery	Phrase	High purchase intent
order food online	Phrase	Users are ready to place an order
food delivery app	Phrase	Relevant to app discovery
best food delivery app	Phrase	Targets users comparing apps
order pizza online	Phrase	Product-specific intent
order burger online	Phrase	Product-specific intent

restaurant food delivery	Phrase	Reaches users looking for restaurant delivery
fast food delivery	Phrase	Targets quick-food customers
food delivery in Ahmedabad	Exact	Targets location-specific customers

Budget: ₹500 × 30 days = approximately ₹15,000/month.

Task 2: Display Campaign – Headphones Launch

Campaign Name: New Headphones Launch – Display

Product: Wireless Headphones

Objective: Brand awareness + website visits + sales

Target Audience

- **Age:** 18–35
- **Students and young professionals**
- **Online shoppers**
- **People interested in:**
 - **Headphones**
 - **Music**
 - **Smartphones**
 - **Gaming**
 - **Technology**
 - **E-commerce**

Placements

I would use placements such as:

- **E-commerce websites**
- **Technology websites**
- **Music-related websites**
- **Gaming websites**
- **YouTube**
- **Mobile apps**
- **Relevant Google Display Network websites**

Banner Content

Main Headline:

“Your Sound. Your World.”

Description:

“Experience powerful sound, deep bass and all-day comfort. Discover our new wireless headphones today.”

CTA:

SHOP NOW

Banner Design

The banner should include:

- Large headphone product image
 - Product name/logo
 - Short headline
 - 1–2 key benefits
 - SHOP NOW button
 - Clean and premium design
-

Task 3: Zomato-Style App – Lots of Clicks but Few Conversions

Problem

The campaign is receiving many clicks, but very few users are completing orders. This means the campaign may be generating traffic without enough conversion-focused traffic.

Steps I Would Take

1. Check conversion tracking

First, I would verify that important actions such as:

- App/website visit
- Restaurant view
- Add to cart
- Checkout
- Completed order

are being tracked correctly.

Why: Incorrect tracking can make the campaign appear to have poor conversion performance.

2. Analyse keywords and ad groups

I would check which keywords and ad groups are generating:

- Clicks
- Conversions

- Conversion rate
- Cost per conversion

I would pause or reduce spending on keywords that generate many clicks but no meaningful conversions.

Why: This shifts budget toward traffic that is more likely to order.

3. Change the bidding strategy

After collecting sufficient conversion data, I would test:

Maximize Conversions

This allows Google Ads to focus bids toward users who are more likely to complete a conversion.

If there is enough reliable conversion data and a suitable CPA target, I could then test:

Target CPA

Why: The objective changes from simply getting clicks to getting more conversions within a desired acquisition cost.

4. Reallocate the budget

Suppose the campaign has three ad groups:

Ad Group	Performance	Action
Food Delivery	High conversions	Increase budget
Pizza Delivery	Medium conversions	Maintain/test
Generic Food	Many clicks, few conversions	Reduce budget

I would move more of the ₹500 daily budget toward the better-performing ad groups.

For example:

- High-performing group → ₹250
- Medium-performing group → ₹150
- Low-performing group → ₹100

I would continue monitoring the results rather than making the allocation permanent immediately.

5. Improve ad copy and landing page

I would make the ads more conversion-focused by highlighting:

- First-order discount
- Free/low-cost delivery
- Fast delivery
- Restaurant variety
- Easy online ordering

I would also ensure the landing page is mobile-friendly and makes ordering easy.

Justification

The main objective is to reduce wasted spend from users who only click and increase the proportion of users who actually complete an order.

Task 4: Remarketing Campaign – IPL Ticket Booking

Scenario

Users visited the IPL ticket booking page but left without purchasing a ticket.

Step 1: Create an Audience

I would create a website remarketing audience:

Audience Name:

IPL Ticket Page Visitors – No Purchase

Audience Conditions

Include:

Users who visited the IPL ticket booking page.

Exclude:

Users who completed the purchase/booking confirmation page.

Example:

Include: `/ipl-tickets`

Exclude: `/booking-confirmation`

Membership Duration

I would use approximately 30 days, because ticket-booking intent is usually time-sensitive.

Step 2: Create a Remarketing Display Campaign

Campaign Type: Display

Goal: Conversions / Ticket Sales

The ads would be shown to eligible previous visitors while they browse other websites and apps within Google's advertising network.

Step 3: Remarketing Ad Message

Headline:

“Still Planning to Watch the IPL Live?”

Description:

“Your IPL experience is waiting! Check available tickets and book your seats before your preferred options are gone.”

CTA:

BOOK TICKETS

Step 4: Add an Offer

If available, I would test an incentive such as:

“Complete Your Booking Today”

or a legitimate limited-time offer.

Step 5: Measure Performance

I would track:

- Remarketing clicks
- Conversion rate
- Cost per conversion
- Completed ticket purchases

- **Return on ad spend (ROAS)**
